

HITACHI **SUBMERSIBLE MOTORS** *For Deep Well Pumps*

Stainless Steel
316

Hitachi's General Features

316 Stainless Construction

All external motor components are made of 316 stainless steel : including the housing, end bracket, end cover, shaft and bolts.

High Quality Thrust Bearings

The thrust bearing is of the Kingsbury type lubricated by the internal fluid. During operation a wedge of water is drawn between the stainless steel pivot shoes and carbon disc to carry the thrust load generated by the pump. The bearing construction is achieved long motor life because of our quality construction based on our experience and feild results.

Sand Resistant Slinger and Lip Seals

A stainless steel slinger and slinger guide are also closely fit to help prevent sand entry. Double rubber seals are installed to prevent well water and contaminants from entering the motor.

Rotor Core with Baked Epoxy Coating

A baked epoxy coating prevents rusting of the rotor core. All internal cast iron parts are coated with epoxy resin then baked for resistance to water and rust.

Highly Reliable Carbon Bearing

Two water lubricated carbon bearings are used as guide bearings. These have extremely large surface area and result in extra alignment support-less whipping and acts as a steady bushing.

Water-Filled Design

The motor lubrication is provided by the internal cooling water consisting of a water, antifreeze, and antirust mixture good to -22°F (-30°C). This mixture is installed at the factory. Water plugs are located near the top of the motor and are used by the installer to check the water level or to top off if needed before installation.

Replaceable Plug-in Type Lead

The motor leads are stranded copper, extremely flexible, 150 inches (3.8m) in length and field replaceable.

Durable Insulation

The motor stator coil of the canned type is mounted in a stainless steel frame and is completely sealed in a protective stainless steel cylinder. Complete water proofing insures long life for the moisture resistant insulation.

Japan Made

All Hitachi submersible motors are manufactured and tested under the most stringent quality control procedures in Japan, providing long service life and trouble-free operation.

High Thrust Bearing

High-Performance Thrust Bearing

The well-established Kingsbury design thrust bearing creates a wedge of water between the pivot shoe and carbon disc. Our innovative design permits high thrust loads to be placed on the bearings while showing no measurable wear after several years of severe duty operation. This allows for long pumping life, virtual trouble free operation and low maintenance. The 300lbs, Maximum continuous up-thrust is absorbed between the upper carbon sleeve bearing and the rotor balance ring.

Number	Part Name
1	Pivot Shoe
2	Bearing Frame
3	Carbon Disc
4	Metal Support
5	Metal Frame
6	Thrust Plate

Output		Bearing Type	Number of Shoes	Down Thrust		Up Thrust	
HP	kW			lbs.	kN	lbs.	kN
5-30	7.5-22	A	3	3,500	15.5	300*(450)	1.3*(2.0)
40	30	B	6	5,000	22.2	300*(450)	1.3*(2.0)

Note:
 1. Thrust ratings showed are continuous except for values marked*
 2. * Momentary rating (3 minutes MAX)

Insulation

Excellent Heat Resistance

Strength against thermal fluctuation and internal mechanical stress is assured by the use of a patented "Hi-canned Resin". The space between the stator, stainless steel protective cylinder and frame is filled with this epoxy resin, allowing faster and greater heat dissipation resulting in longer motor life.

Cutaway Construction for Stator Core

Cable Size and Type 150 inches (3.8m) Lead Wire Standard Length

Type of Lead Wire-600V Class

Ethylene-Propylene Rubber Insulated Chloroprene Denatured Cabtyre Cable.
 Plug-in (Field replaceable)
 Color coded
 USA Standard
 (Black, Yellow, Red, Green)

Voltage	Output		Lead Wire Size		AxB inch(mm)

Production Plant in Japan

Production plant named Narashino division has the traditional motor technologies inheriting from Hitachi, Ltd. since its establishment in 1910, and has manufactured highly reliable products as a driving force of all industries. The quality of industrial equipment that requires high reliability is supported by strict quality assurance activities, from the evaluation of raw materials to the final inspection after the production under severe conditions. The plant will continue to produce various type of products as many kind of motors, frequency inverters, fans and water pumps in the same site to fully utilize our advanced technologies for each product.
